LYKO launches an API to connect to the **Mobility World**

Some dream about it, others talk about it, Lyko has officially launched it. A technology that enables the reservation of a myriad of mobility services, both public and private, from around the world, irrespective of the type of the platform.

Nearly 7 in 10 Europeans...

69.5% of Europeans think it would be useful to have a single application covering all modes of transportation. According to the third survey by the ACA and 9 Automobile Clubs, more and more public and private entities are working to develop applications that centralize information and ticketing systems for various mobility services. Known as "MaaS" solutions, for Mobility as a Service, their deployment enormous time and investment in research, development and commercial prospecting.

"It can often take several months before concluding a partnership with a mobility service, then becoming familiar with these databases and information systems, or even integrating payment for these services..."

Laurent BOUZON, CEO & Co-founder of Lyko

Upon observing these challenges, Laurent Bouzon, Adrien Hugon and Yacine Belarbi co-founded Lyko, with an intention to make MaaS easily accessible to ALL innovators. After 2 years of hard work, Lyko was born as a "smart toolbox".

A single API, countless possibilities

A suite of tools gathering all the functional bricks needed to create the best intermodal mobility solution. From planning to payment, in concrete terms Lyko guarantees to deliver an end-to-end mobility experience. Via its API, it provides access to the distribution systems of more than 1,500 mobility services (public transport, train, scooter, VTC, car-sharing, car rental, parking...) and a powerful intermodal journey planner.

"Unlike existing Open Source journey planners, our own algorithms allow to process a large volume of data and to plan intermodal trips on a national scale."

Adrien HUGON, CTO & Co-founder of Lyko

Launched at the end of last year, Lyko is already generating interest from cities and the travel and mobility industry. Its technology has already convinced major European groups such as Air France, Volkswagen and Thales. Currently, in talks with a few investors and business angels, future fundraising should greatly help it to develop its network of partners. What a great way to innovate as fast as we move!
